Minh Nguyen

Lead Product Designer · products for money, data and trust

Ho Chi Minh City · open to remote across APAC · xpland.nguyen@gmail.com · minhnguyenrenol.github.io/portfolio-window

SUMMARY

Ten years in product design, after four as a front-end developer. I design products people have to trust with their money, data or security, and I lead by writing the standard down and coaching people against it. All my NAB releases are live except RegShield, which is still in build. Three are measured in production; every other number says how it was measured.

EXPERIENCE

Senior Product Designer · National Australia Bank, Ho Chi Minh City

Feb 2024 – now

- Corporate & Institutional Banking, May 2025 – now. Design lead for straight-through processing, Jan – Jun 2026: moved the hand-off of approved facilities, the bank's large corporate loans, out of email and into the credit platform. Live since mid-2026. The hand-off takes about 5 minutes instead of up to a day, watched in real hand-offs and confirmed by bankers. On the prototype, 8 people scored it 4.40 / 5 on ExQual, Gold against a Silver target. Coached Julie, a second designer.
- Redesigned the single large exposure check, live since August 2025. In five moderated sessions: 67% fewer clicks to review, 39% fewer to simulate a change, ExQual 4.57 / 5 against a Silver target. A month after launch the bank's "establishing relationship" score reached 70 out of 100 for the first time, up from 68; other work feeds that score too. Coached Ariel, a second designer.
- Sole designer on RegShield, a review tool for regulatory reporting, starting with faulty trade reports to the US regulator. Rebuilt an inherited prototype around the operator's day. The same 8 people scored the old tools 3.2 and the rebuild 4.6 on ExQual, Platinum against a Bronze target. In build, not live. 23 decisions logged from 27 working sessions.
- Merchant Services, May 2024 – May 2025. Led the onboarding redesign across two channels and three products. In testing with 10 merchants, applying took about 10 minutes instead of 21–25, with an ease-of-use score (SUS) of 80.7. After Phase 1 went live, dropout fell by a relative 20%. Mentored Ami, a designer, on audits, testing and synthesis.
- Presented merchant onboarding, the exposure check, straight-through processing and RegShield to NAB's executive leadership. Set up and run a fortnightly design critique for 4–6 designers. AI adoption lead for the Vietnam design chapter since March 2026. Q2 and Q3 FY26 individual awards; winner, Design Day Challenge 3.
- Built two tools for the design chapter. A feedback kit for coded prototypes: stakeholders comment on the running screens and the updated prototype is ready the next day; two other designers now use it. A Cursor plugin that rebuilds a coded prototype in Figma at NAB's four screen sizes: 20 screens in two to three days instead of about two weeks, by my estimate. Rollout to other designers is under way.

Lead Product Designer (contract) · Unera, consumer stablecoin wallet and issuer platform

Dec 2025 – now

- Hired as a UI/UX designer, promoted to Lead Product Designer. Led design for the Huma wallet (43 responsive web pages), the hUSD issuer portal and the operator console; all three design complete and with engineering. Responsive web; a native app is planned, not built.

- Built three token-based design systems on one shared spine, in code the client's engineers build on. From June 2026, led a part-time junior designer who drew the error and edge states for all three products.
- Prototype in code with AI tools and audit the build against the product spec, line by line.

UI Designer · Refinitiv Labs (part of London Stock Exchange Group), Singapore Jan 2021 - May 2022

- Ran the UX for PC Intelligent end to end: SUS 89 against a 71–76 target and adoption interest 4.6 / 5 in testing.
- Designed FX Impact Intelligence for Eikon. Built a 52-colour palette for colour-blind users, adopted across Labs products.
- Interviewed more than 10 design candidates on the hiring panel, with input on whether to hire.

Senior Product Designer · Hearti Lab, Singapore May 2018 - Oct 2020

- Hired and led two designers. Launched 3 products and delivered 15 projects in two years.
- Designed CYBERhythm, a cloud-security dashboard.

Product Designer, UX/UI Designer · Green Koncepts and EGIDE, Singapore 2016 - 2018

- Energy-management platforms for 65 clients in four ASEAN countries.

Front-end developer and UI designer · Singapore 2012 - 2016

- Built and shipped production web apps in HTML, CSS and JavaScript.

LEADERSHIP AND TEACHING

- ADPList mentor since 2022: 250+ sessions, 50+ designers
- Wrote and ran an 8-week product design course, two cohorts
- Host, NAB design chapter catch-ups, 4.53 / 5 average
- EVO Toastmasters: Vice President of Education (2023–24), President (2024–25), Mentor (2025–26); members 7 → 20

EDUCATION

Master of Professional Studies, UX Design, Maryland Institute College of Art, 2023

Bachelor of Computing (eCommerce), National University of Singapore, 2012

LANGUAGES

Vietnamese (native), English (professional)
